

Amendments to the Specification

Please replace the Title with the following new title:

“An organic electroluminescent display device with means for eliminating degradation of image”

Amendments to the Specification

Please replace the ABSTRACT with the following new ABSTRACT beginning on a separate page:

-- A display device for displaying an image. The display device includes a plurality of display pixels, a controller for generating a driving signal for driving the pixels, and sensors. The sensors monitor operating conditions of the pixels, and the controller is adapted to receive data related to the operating conditions from the sensors to determine a brightness change of the pixels caused by the operating conditions and to generate the driving signal in dependence on the brightness change.--
